Test Case ID: Uniquely identify the test(meaningful).

Title: States what is being tested.

Description / Objective: Explains the purpose of the test.

Preconditions: Lists conditions that must be true before execution.

Test Steps: Gives repeatable actions to perform.

Expected Result: Describes the required system behavior.

Actual Result : Records the observed behavior

Status: Pass, Fail, Not Run and Blocker

A bank has developed an ATM system. Customers can withdraw cash using a valid bank card and PIN. The ATM should allow withdrawals when the account has sufficient funds, reject amounts that are zero or negative, update the balance after successful withdrawals, and reject withdrawals that exceed the available balance.

1. Complete Test Case: TC-001

1. Test Case ID	**AMS-001**
2. Test Case Title	Verify Successful Cash Withdrawal with Sufficient Balance
3. Description / Objective	Verify that a customer can withdraw cash successfully when their account has sufficient funds.
4. Preconditions(Items)	The ATM is operational and contains sufficient cash. A valid card is inserted, the correct PIN has been entered, and the account balance is 1,000 DKK.
5. Test Steps	1. Select Withdraw Cash. 2. Enter 300 DKK. 3. Confirm the withdrawal. 4. Collect the cash. 5. Check the remaining account balance.
6. Expected Result	The ATM dispenses 300 DKK, displays a successful withdrawal message, and updates the account balance to 700 DKK.
7. Actual Result and Test Status	Illustrative execution: The ATM dispensed 300 DKK, displayed the success message, and updated the balance to 700 DKK. Status: PASS (example only).
8.Status	Pass/Fail/Blocker
