A Student Management System has a login page with Username, Password, and Login button. Design three functional test cases to verify the specified login behavior. No C# code is required.

1.Login Page

STUDENT MANAGEMENT SYSTEM — LOGIN
Username: _____
Password: _____
[Login]

2. System Requirements

- A valid username and password allow login and redirect the student to the Dashboard.
- An incorrect username or password displays: “Invalid username or password.”
- If either field is empty, display: “Username and password are required.”
- After any unsuccessful login, the student remains on the Login page.

Valid test credentials:

Username = student01

Password = Test1234

3. Your Task

Write three complete manual functional test cases: TC-01 Successful Login; TC-02 Incorrect Password; TC-03 Empty Fields. For each test case, fill in the template below. Do not assume a test passed unless you actually executed it.

TC-01 — Successful Login

Test Case ID: TC-01

Title: Successful Login

Description:

_____

Preconditions: _____

Test Steps: 1. _____

2. _____

3. _____

Expected Result: _____

_____

Actual Result: Not executed / _____

Status: Not Run / Pass / Fail

TC-02 — Incorrect Password

Test Case ID: TC-02

Title: Incorrect Password

Description:

_____

Preconditions: _____

Test Steps: 1. _____
2. _____
3. _____

Expected Result: _____
_____

Actual Result: Not executed / _____

Status: Not Run / Pass / Fail

TC-03 — Empty Fields

Test Case ID: TC-03

Title: Empty Fields

Description:

_____

Preconditions: _____

Test Steps: 1. _____
2. _____
3. _____

Expected Result: _____
_____

Actual Result: Not executed / _____

Status: Not Run / Pass / Fail
